

The graph displays the number of nights lost to weather for two groups. The 'Without balance stage' group (red line) shows a sharp increase in nights lost to weather starting around the 8th night, peaking at approximately 10 nights lost around the 10th night, and then gradually decreasing. The 'With balance stage' group (blue line) remains relatively low and stable, with a slight increase starting around the 8th night, peaking at approximately 4 nights lost around the 10th night, and then gradually decreasing.
